

IDSN 599 CROWDFUNDING

VALIDATION REPORT

ASSIGNMENT 14

OVERVIEW

This report summarizes the validation methodology and results for our Vexcite MK2 campaign.

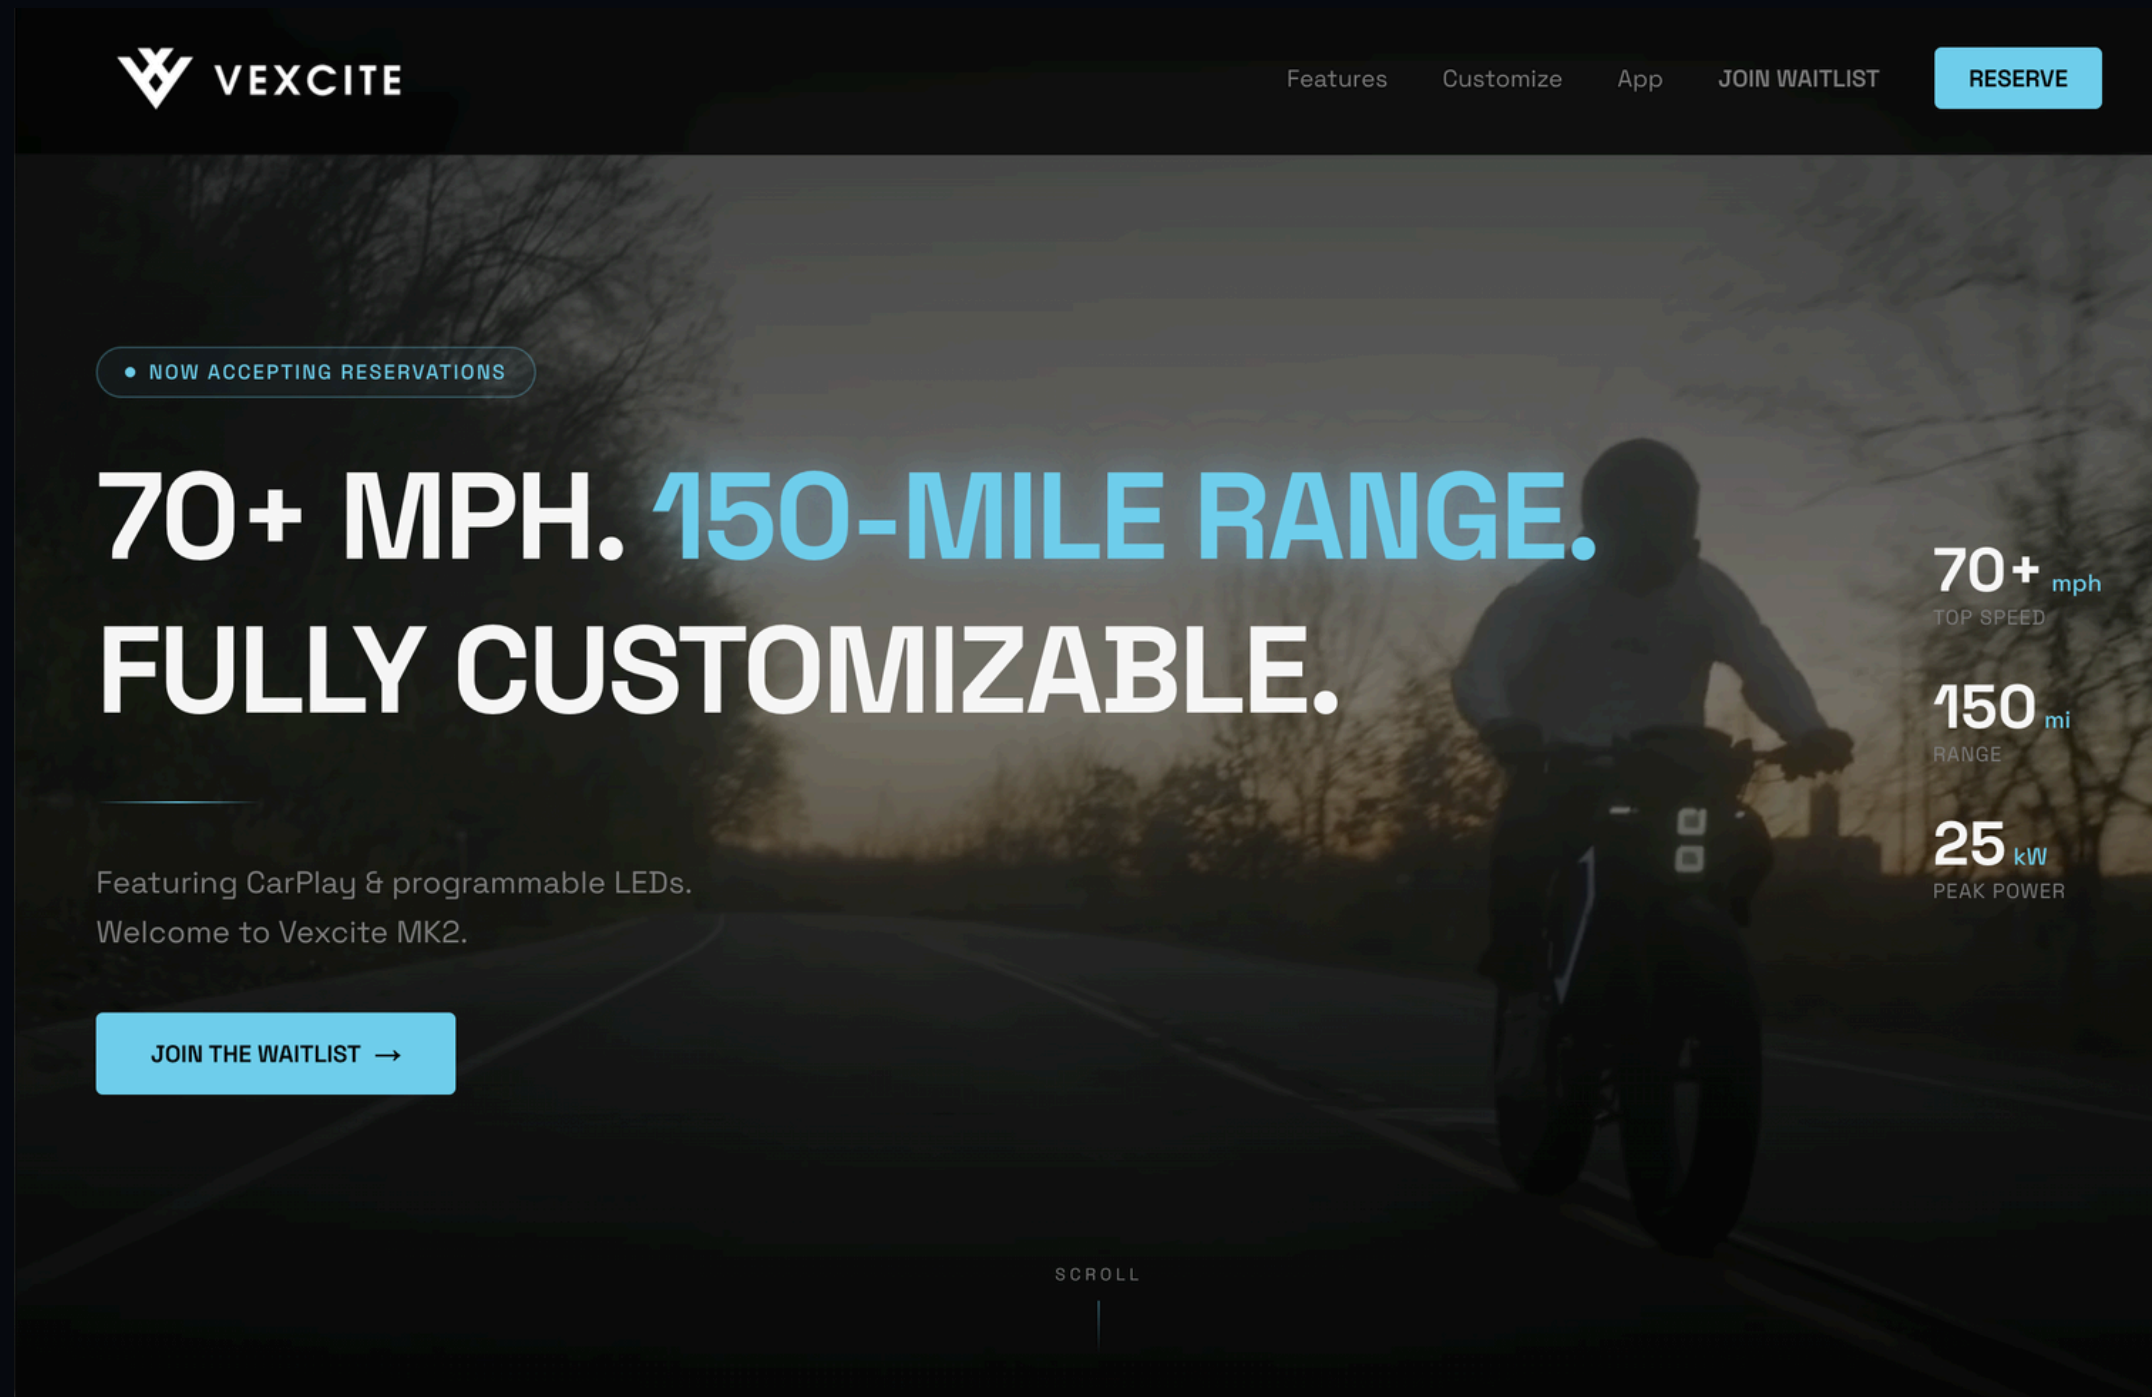

Using paid traffic, landing page testing, and audience segmentation, we evaluated whether there is strong enough market interest to support a successful pre-launch and crowdfunding strategy.

In this report, we highlight the best-performing audiences, ad creatives, and landing page decisions, along with the key metrics that helped us evaluate performance.

Our objective was to test demand for Vexcite MK2, a high-performance electric bike positioned around speed, range, customization, and connected technology. Core product hooks included its 70+ mph top speed, 150-mile range, integrated CarPlay, programmable LED system, modular body panels, and app-based ride customization.

The goal of this validation process was not just to determine pass or fail, but to identify which messages, visuals, and user segments showed the strongest response so we can make smarter decisions for launch.

LANDING PAGE DESIGN

Access Here:

Vexcite MK2

70+ mph. 150-mile range. Fully customizable. The most advanced electric performance bike ever built.

vexcitemk2.com

LANDING PAGE DESIGN

The image shows the hero section of the Vexcite website. At the top, there is a dark navigation bar with the Vexcite logo on the left and links for 'Features', 'Customize', 'App', 'JOIN WAITLIST', and a 'RESERVE' button on the right. Below the navigation bar, a large, dark, atmospheric photograph of a person riding a motorcycle on a road at dusk or dawn serves as the background. Overlaid on the left side of the image is the headline '70+ MPH. 150-MILE RANGE. FULLY CUSTOMIZABLE.' in large, bold, white and light blue text. To the right of the headline, three performance metrics are listed vertically: '70+ mph TOP SPEED', '150 mi RANGE', and '25 kW PEAK POWER'. At the bottom left, a white button with the text 'JOIN THE WAITLIST →' is visible. The overall design is modern and tech-oriented, emphasizing the vehicle's performance and customization options.

MOTORCYCLE SPEED. E-BIKE AGILITY.

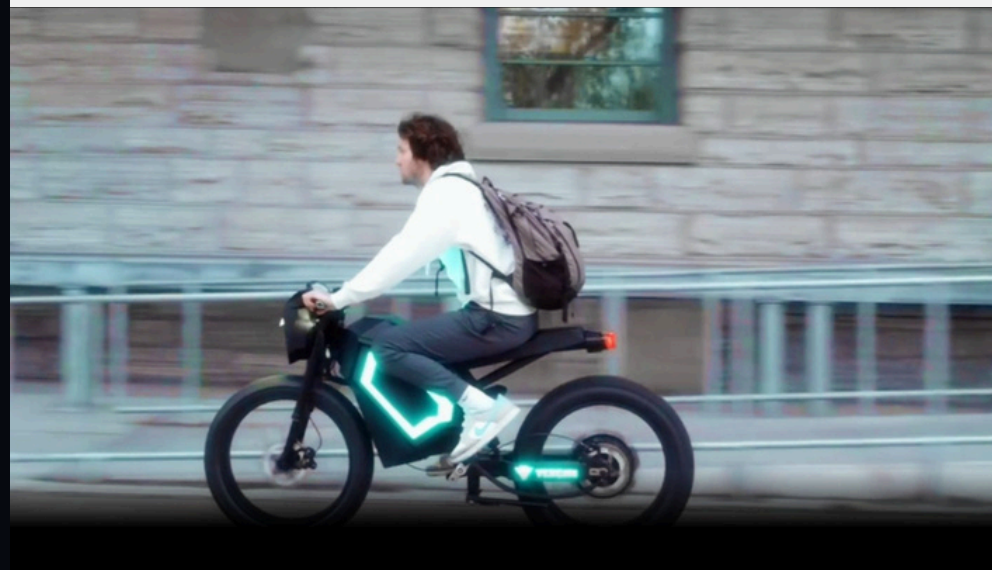

Designed for riders who demand performance without compromise.

The advertisement features three vertical panels. The first panel on the left shows a person in a white jacket and blue helmet riding an e-bike on a city street. The middle panel shows a person riding an e-bike on a desert trail. The third panel on the right shows a close-up of the e-bike's display screen, which displays the Apple CarPlay interface with various app icons.

70+ MPH PERFORMANCE
Unrivaled acceleration and top-end speed that rivals combustion engines, delivered silently.

150-MILE RANGE
70V/50Ah advanced BMS lithium-ion battery for long rides without charge anxiety.

INTEGRATED CARPLAY
Wireless Apple CarPlay and Android Auto built into a bright, waterproof display.

FULLY CUSTOMIZABLE LED LIGHTING

TM Tetra lighting color options

Endless configurable start up animations

Front and rear sequential turn indicators

Illuminated interactive buttons

12,000 lumens of light

DESIGNED TO BE YOURS

With swappable body panels, adjustable suspension, and a growing catalog of bolt-on accessories, the MK2 is built to ride the way you do.

MODULAR COLORED BODY PANELS
Harley-Davidson's modular design allows you to customize your Street Glide Special with a variety of color and finish options. Choose from a range of factory-fitted or custom design color schemes.

SWAPPABLE ACCESSORIES
Harley-Davidson's modular design allows you to customize your Street Glide Special with a variety of color and finish options. Choose from a range of factory-fitted or custom design color schemes.

MULTIPLE TIRE SIZES
Harley-Davidson's modular design allows you to customize your Street Glide Special with a variety of color and finish options. Choose from a range of factory-fitted or custom design color schemes.

ADJUSTABLE SUSPENSION
Harley-Davidson's modular design allows you to customize your Street Glide Special with a variety of color and finish options. Choose from a range of factory-fitted or custom design color schemes.

HOW IT WORKS

- 1**
CONNECT
Sync your bike with the Vexille app and your bike is ready to configure.
- 2**
CUSTOMIZE
Choose your LED colors, program animations, and save your ride profile.
- 3**
RIDE
Power on and experience the most advanced electric bike ever built.

THE FUTURE IS ELECTRIC. BE FIRST.

Jay Robinson

Are you going to lobby for acceptance of mode switching as meeting the requirements to be considered a class 2 low speed electric bicycle? You better start because there is one state already proposing to make mode switching illegal.

Early Organic Testing Revealed Positioning Challenges + Messaging Opportunities

What We Did

- Posted in Reddit + niche forums (framed as real users, not ads)
- Tested:
 - E-bike vs motorcycle
 - Performance vs practicality

Implication

- “E-bike” positioning creates confusion + skepticism
- Organic only works with credibility + trust

Results

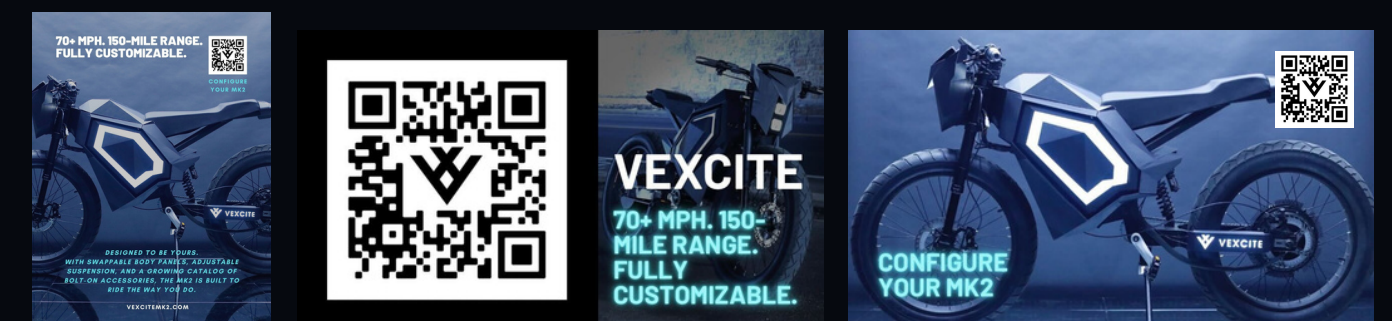

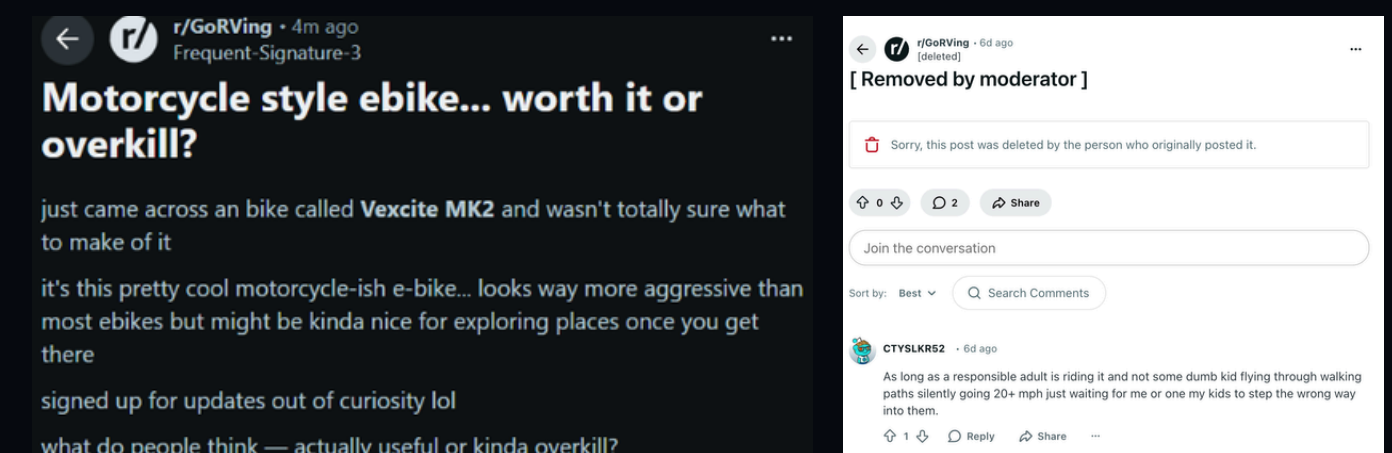

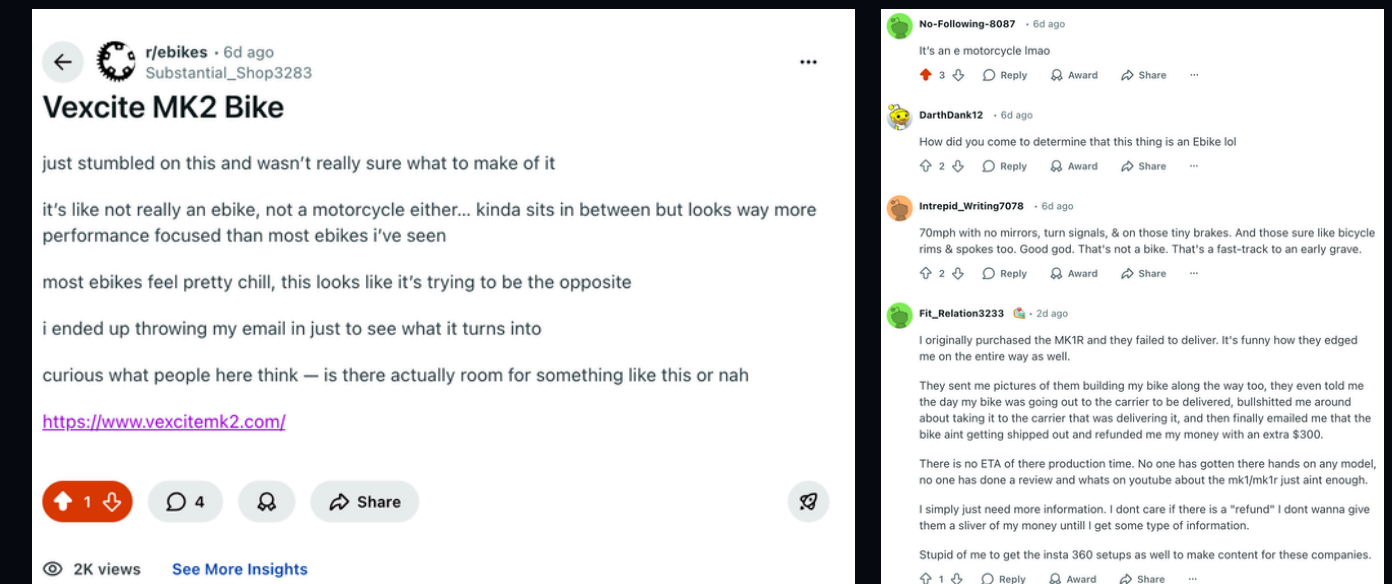

- 2K views
- 30 clicks
- Minimal email conversions

Key insight

- Users see this as a motorcycle alternative, not an e-bike

Takeaways

- Didn’t validate demand but validated messaging painpoints through feedback from reddit users across threads

QUALITATIVE VALIDATION

Strong Purchase Intent Driven by Speed, Range, and Design

Key Insights:

- 5/5 depositors cited speed, range, and design as primary drivers
- Multiple users expressed intent to pay in full immediately
- Product positioned closer to “electric motorcycle” than e-bike
- Strong alignment with daily commuting + real road usage (45–60 mph roads)
- Early signals of community + ambassador interest

“I would take it almost anywhere... I want to ride with traffic.”

— Daily commuter
(2,000+ miles experience)

“Price, speed, distance, and design... I couldn’t say no.”

— Depositor
(Ready to pay in full)

“Dream bike material.”

— Returning customer + community rider (2,000+ miles experience)

“I’d be honored to test and promote this in my country.”

— Potential distributor / evangelist

“You guys nailed it on speed and style.”

— Premium e-bike owner upgrading

VALIDATION RESULT: PASS

Why?

- Strong CTR + Low CPL across our main target audience
- Strong positioning: Motorcycle Alternative > Standard E-bike
- 800+ Waitlisted, 13 Reservations + 2 Paid in Full
- Unique Market Drivers: Speed, Range & Design

What Now?

- Stronger Website Optimization (LP → Full Purchase)
- Clean Positioning – Shift away from E-bike comparison

Proceed to next phase with clearer market positioning and branding. As well as a stronger conversion strategy.

EMAIL CAMPAIGNS

Email Campaign Strategy + Sequences Included: [Here](#)

Hello again,

Caden & Cooper here, from the Vexcite team. We wanted to follow up because we just opened something for the people who got in early on our MK2 waitlist. We're introducing the Vexcite Founders Club. If you reserve now, you lock in **\$4,800** founder pricing. Retail will start at **\$5,999**.

Submit a fully-refundable **\$100** deposit to reserve your spot in the production queue and your **\$1,200** discount.

Vexcite Founders Club members also get first access to demo events, early customization options, and priority on limited accessories and colorways before anyone else.

Reserve here: [Vexcite MK2 Reservation](#)

Quick refresh on what we're building:

- 70+ mph top speed
- Up to 150 miles of range
- 1M+ LED color combinations
- Swappable body panels
- CarPlay display
- Custom suspension

The founder price won't last -- once enough of you reserve, this tier closes. If you've been thinking about it, this is the [best deal](#) on our bike you'll see. Let me know if you have any questions. Just hit reply.

- Caden & Cooper
Vexcite Bikes
[vexcitemk2.com](#)

Hello!

Caden & Cooper here from Vexcite. We wanted to reach out personally and say thank you for signing up for the MK2 waitlist. We are still early in the build process and appreciate everyone who is following along.

We're curious, though. What was it about the MK2 that caught your eye? Was it the speed, the look, the lights... something else entirely? Also, what are you riding right now? A different e-bike? Motorcycle, car, a scooter? Nothing at all?

We'd love to hear about it. What do you like about how you get around? What drives you crazy about it?

We're a small team of skilled engineers building this thing with a lot of direct input from the people who actually want to ride it. So if you've got thoughts, opinions, complaints about what's out there, we want to hear them. Hit reply and let us know.

Talk soon,
Caden & Cooper
Vexcite Bikes

You're on the Vexcite MK2 waitlist.

Here's everything you should know about what you're waiting for:

- ⚡ 70+ mph top speed
- 🔋 Up to 150-miles of range
- ⚡ 25kW peak power
- 📱 Wireless CarPlay + Android Auto
- 💡 1M+ LED color combinations
- 🔄 Swappable colored body panels
- 🛖 Adjustable suspension

[-- Reserve yours for \\$100 \(fully refundable\)](#)

Under the hood

- Custom thermal management hub motor
- 72V 50Ah lithium-ion battery with advanced bluetooth BMS
- 3 adjustable speed modes
- Fully adjustable front and rear suspension: damping, travel, adjustable shock

Customization & Tech

- 1M+ LED color combinations with programmable animations
- 12,000 lumens of integrated lighting
- Swappable modular body panels — change the entire look in seconds
- Multiple tire options (street, all-terrain, off-road)
- Growing catalog of bolt-on accessories (mirrors, throttles, grips, pegs, storage)
- Vexcite mobile app: ride diagnostics, LED control, rider profiles

The MK2 is designed to be configured to how you ride, and reconfigured whenever you want.

[Reserve MK2.](#)

What riders are saying

We've done 250+ test rides. Here's what keeps coming back:

"Very smooth ride, quick acceleration, and light handling."

"As a motorcycle rider, I found the bike extremely similar to what I'm used to riding."

"Best looking e-bike I've ever seen."

"Looks better than most bikes out there."

Pricing & Reservation

Founder Pricing: **\$4,800** (vs. \$5,999 retail) via \$100 refundable deposit

- Locks your spot in the production queue
- Early depositors get a free color customization kit (\$250 value)
- Production slots are limited. Earlier deposits = earlier delivery.

[-- Reserve your MK2 for \\$100](#)

What's next

Demo bikes are coming, events are being booked, waitlist members and depositors hear about everything first.

Stay tuned,
Vexcite Team

Vexcite Community,

The MK2 [customization tool](#) is live!

Head to [vexcitemk2.com](#) to view which parts of the bike can be customized. Explore body panel colors, view lighting options, and see it come together in real time.

Swappable panels. 1M+ LED color combinations. No two MK2s have to look the same.

Reserve now and your first color kit is on us. That's a \$250 value -- free -- locked in for every reservation placed while this offer is active. [Use the customizer to explore MK2 color possibilities.](#)

No need for additional input now -- when your MK2 ships, we will reach out to verify your preferred color spec. No extra charge, no add-on at checkout.

Reserve now and claim your free color upgrade: [Reserve](#)

Patron Edition	\$12,000	Founders perks + studio tour + first SYNC suit + lifetime priority on launches	5	1	\$12,000	Press hook; 1 expected	5 Yes
Limited subtotal				6	\$59,500		— 1
ADD-ONS — Attach to any bike pledge via Kickstarter add-on system (pure AOV lift)							
450A Controller	\$400	Upgraded controllerfor higher speedmodes	Open	18	\$7,200	97% margin per accessory model	Add-on
Extra Body Panels	\$250	Additional colored panel set in alternate colorway	Open	14	\$3,500	80% margin	Add-on
SYNC Suit Early Bird	\$450	\$150 off retail; capped to lock Y2 demand	200	30	\$13,500	Sleeper play; books Y2 revenue now	Add-on
10A Fast Charger	\$150	Cuts charge time in half vs standard 5A	Open	22	\$3,300	45% margin	Add-on
Off-Road Tire Set	\$180	Knobby tire set for trail/dirt use	Open	8	\$1,440	40% margin	Add-on
Pegs + Phone Mount	\$60	Combo accessory pack	Open	16	\$960	Combined ~55% margin	Add-on
Add-on subtotal				108	\$29,900		
CAMPAIGN GRAND TOTAL				979	\$565,550		
Existing Deposit Holders 42 paid deposits (30 at \$4,200 + 12 at \$4,800) carry over directly into Tier 1 and Tier 2 early bird slots. They get the price they already paid; no double-charge. Treat as Day 1 backers for algorithm boost.							
Sub-Bike Tier Logic 1,500 waitlist signups can't all afford a bike. Sub-bike tiers convert non-buyers into backers, which boosts backer count for Kickstarter algorithm visibility.							
SYNC Suit Sleeper Play SYNC doesn't launch until 2028 but the \$450 early-bird add-on (capped at 200 units) locks in \$90K of Y2 revenue at zero CAC today. Plus the \$150 reservation tier at sub-bike level locks another 90 units of intent. Combined: ~290 SYNC suits pre-sold before product even exists.							
Bundle Mechanics MK2 + Essentials at \$6,500 bundles ~\$220 of accessories at \$300 sticker price. ~\$110 COGS on the \$700 step-up = \$590 incremental gross profit per bundle vs. base. If even 3 of 8 base buyers shift up, that's \$1,770 extra margin without a new customer.							
Risks Sub-bike merch fulfillment is its own logistics, confirm vendor before launch. (3) SYNC Suit reservation creates 2028 delivery obligation 18 months before product ships

NEXT STEPS + INSIGHTS

Direction: The next 3-4 months consist of closing capital, demo bike delivery, and Kickstarter execution in one sequence. All other initiatives are put on the backburner until successful kickstarter.

CLOSE TOOLING RAISE

Close the \$70K raise to trigger supplier orders. The 60–90 day production window puts MK2 demo bikes in hand mid-July to mid-August, which sets the launch sequence: Kickstarter pre-launch as soon as demos arrive, campaign launch 1 week before upcoming Electrify Expo, using EE as the in-person conversion engine for the most important weekend of the year.

KICKSTARTER PREP

Pre-write the Day 1 conversion email for the 42 existing deposit holders to maximize first-48-hour funding. Schedule the Founders Edition scarcity reveal at the 50% funded mark.

NEW AD CREATIVE

Build the new content engine the moment demo bikes land. MK1 footage carried the brand to 1,600 signups, but the MK2 is the production product, and backers and press need to see the bike in motion. Refresh Meta creative within 48 hours of first MK2 footage.

INSIGHTS

The validation process surfaced an audience we never would have written into the original strategy. Field test rides pointed toward the lapsed motorcyclist and e-bike upgrader, but Meta data revealed a third segment, the RV adventurer, that ended up being our top-performing audience and represents net-new TAM rather than a slice of existing demand.

The same ad can perform dramatically differently across audiences. Ad creative we assumed would underperform did well when paired with the right audience. The same creative flatlined against the wrong segment. Audience targeting is the real lever, not the ad itself. The hypotheses framework forced us to test combinations rather than draw conclusions from a single variable.

Personal connection beats polish. The messaging that worked best was descriptive of the product, and felt like a friend sharing content rather than advertising slop or AI-generated feed.
