Alex's Struggles

Confusing
Navigation &
Hard-to-Find
Information

Inaccurate
Wait Times &
Poor Order
Transparency

Limited
Customization
& Menu
Mismatch

Why they matter

1

Students are usually rushing between classes, so unclear navigation → frustration → abandoning the app and going in person.

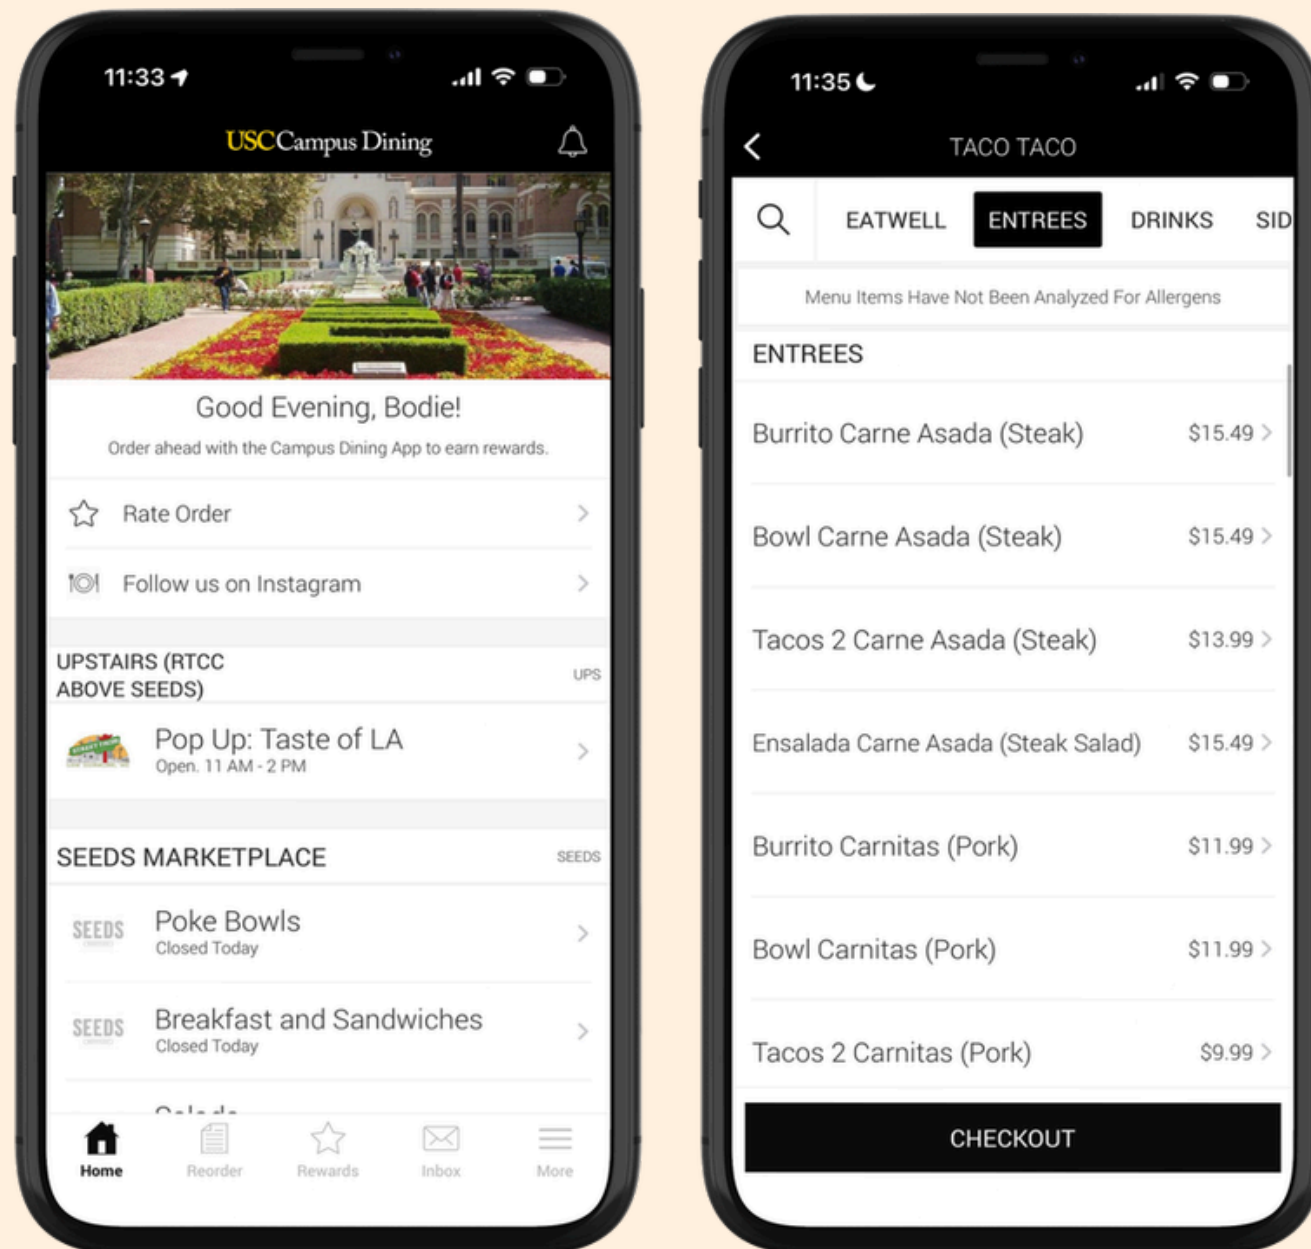

2

Students rely on precise timing—if the app says “ready in 5 minutes” but it’s actually 15, they’ll be late to class.

3

Students want control—especially those with dietary needs. A mismatch between what they expect and what’s available makes the app feel unreliable.

Existing Solutions

1

There is absolutely no hierarchy

2

Isn't listed in an order that is intuitive or consistent across menus

3

Lacks graphics, colors, and indicators to food types or varieties

4

Food types aren't categorized in intuitive ways. You can't tell what is the most popular, you can't pin items, etc.

Primary Persona

ALEX - 18 YEARS OLD
USC COLLEGE FRESHMAN
MARSHALL SCHOOL OF
BUSINESS

GOALS

- Manage time efficiently
- Navigate campus quickly & easily
- Check dining hall hours and menus in real time
- Receive timely notifications (Class, food, clubs, etc.)

MOTIVATIONS

- Efficiency, communication, speed, campus engagement, class & time management

PAIN POINTS

- Missing information
- Navigation complications
- non-existent features

Secondary Persona

PAOLO SIGISMONDI
USC ANNENBERG PROFESSOR
10+ YEAR FACULTY

GOALS

- Easier app navigation
- Manage time more efficiently
- Better wait time estimate
- More efficient re-order
- Ability to pay with credit card
- Option to schedule food order

MOTIVATIONS

- Time management and navigation clarity to ensure he can buy food in an efficient manner and prioritize his work

PAIN POINTS

- Navigation complications
- Time efficiency
- Non-existent features that would make process smoother

Tertiary Persona

SHELBY SMITH - 55 YEARS OLD
USC - CHIEF OF STAFF
DESK & FIELD BASED JOB

GOALS

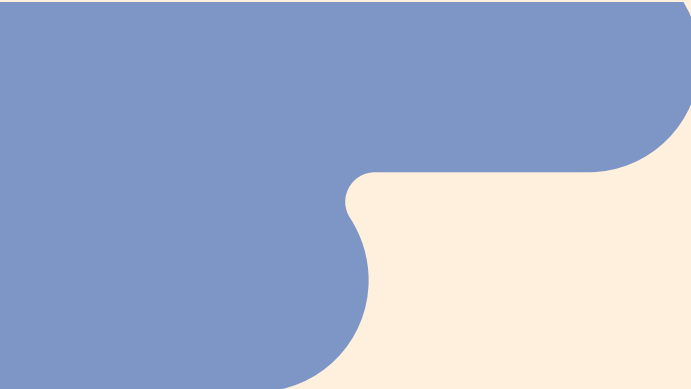

- Access real-time campus data
- Respond to student and staff inquiries
- Manage workflows and approvals
- Monitor alerts

MOTIVATIONS

- Efficiency, time saving, clear & direct communication, student success & support
- Real-time feedback loop

PAIN POINTS

- Time-Inefficient, Unreliable information (outdated), no real time insights, poor cross-department communication

HOW MIGHT WE

make the USC Mobile Ordering app more transparent and trustworthy—so students can rely on accurate wait times and clear pickup experiences?

SMART ORDERING + PAYMENT SIMPLIFICATION

Simplify the ordering interface to be visual and personalized, and in-app balance display for a frictionless checkout.

WHAT WE IMPROVE

Re-design the ordering interface so users can easily find their orders

- Intelligent listing orders that adapt to each user
- Visual ordering with color hierarchy and images
- Display Dining Dollars + swipe balance on home screen

WHY

- Users can't easily find what to order, and the app doesn't adapt to their preferences
- Confusion around when to use swipes vs Dining Dollars is a major friction point.

USER BENEFIT

- More friendly ordering interface that encourages spending
- Faster checkout with more information

DVF

Desirability

- Students want faster, clearer, more predictable mobile ordering.
- Accurate wait times, easy customization, and quick reordering reduce daily stress.
- Trojan Bites fits real student behavior: saving time between classes and avoiding long lines.

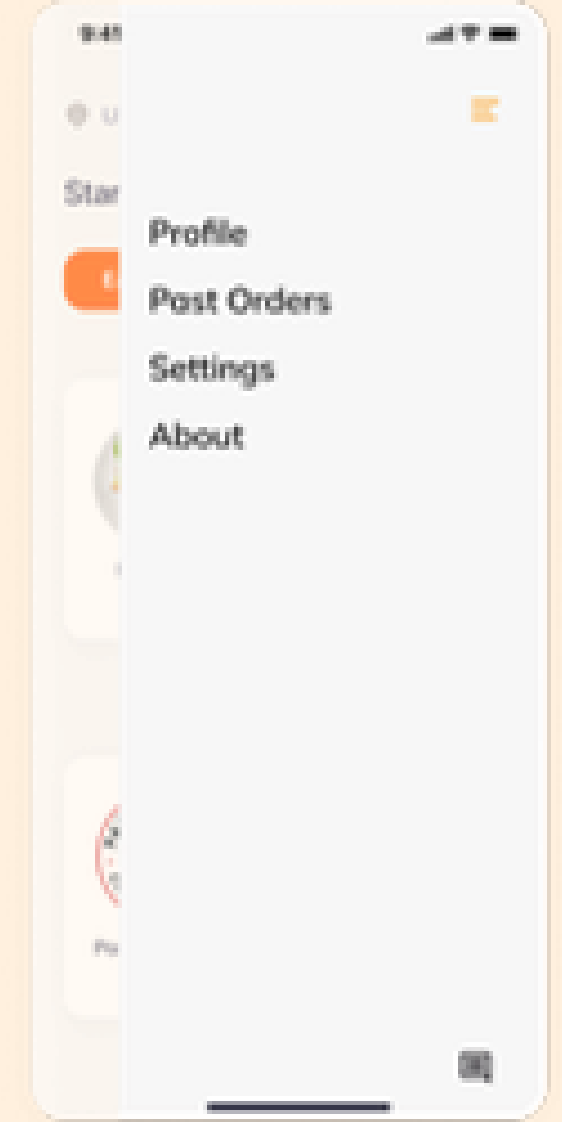

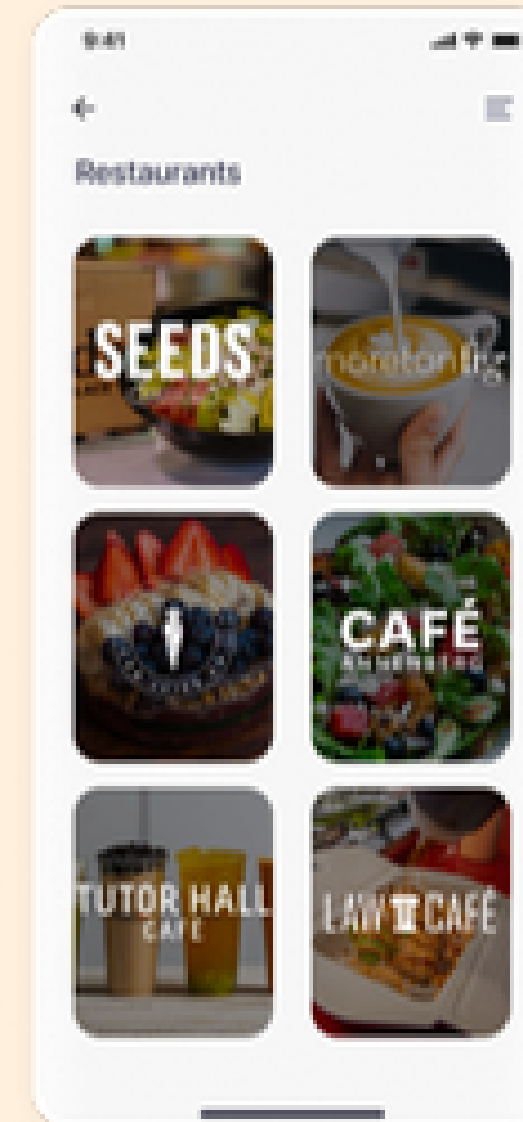

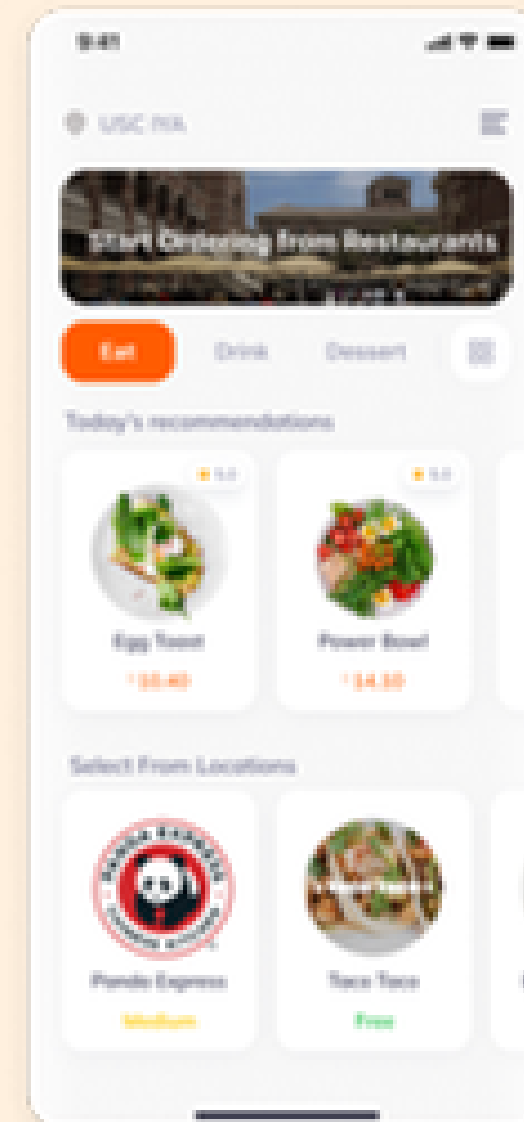

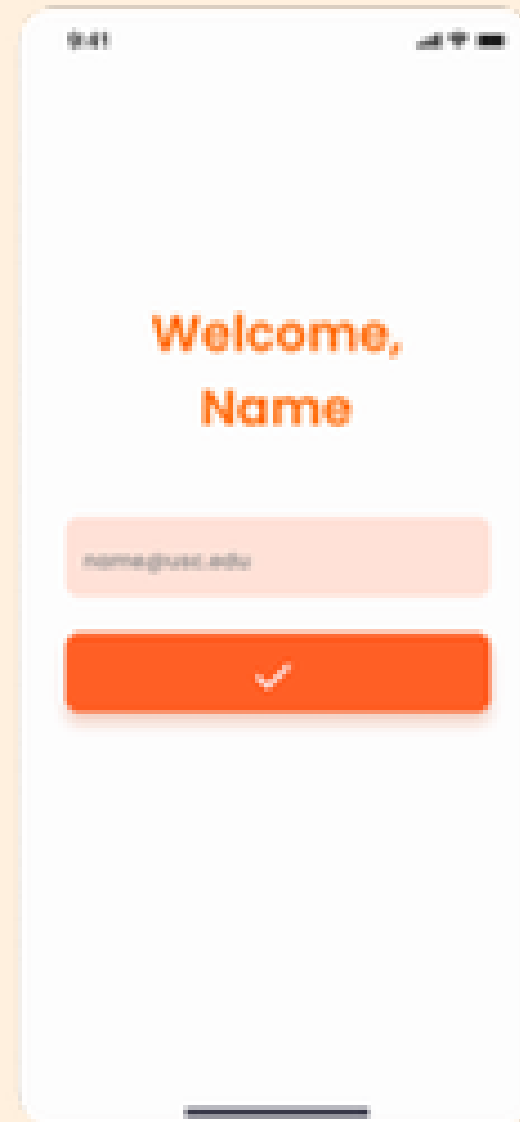

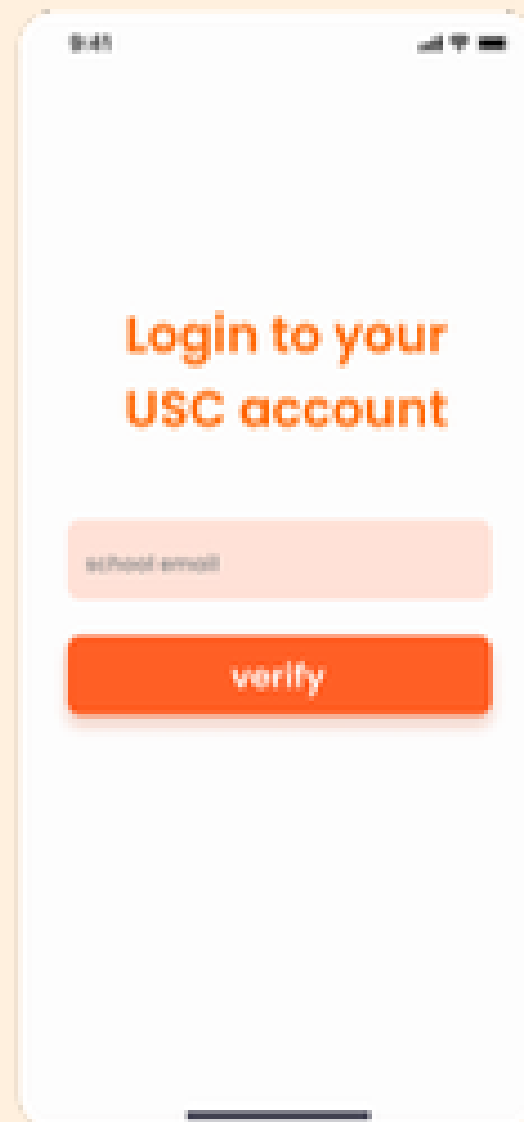

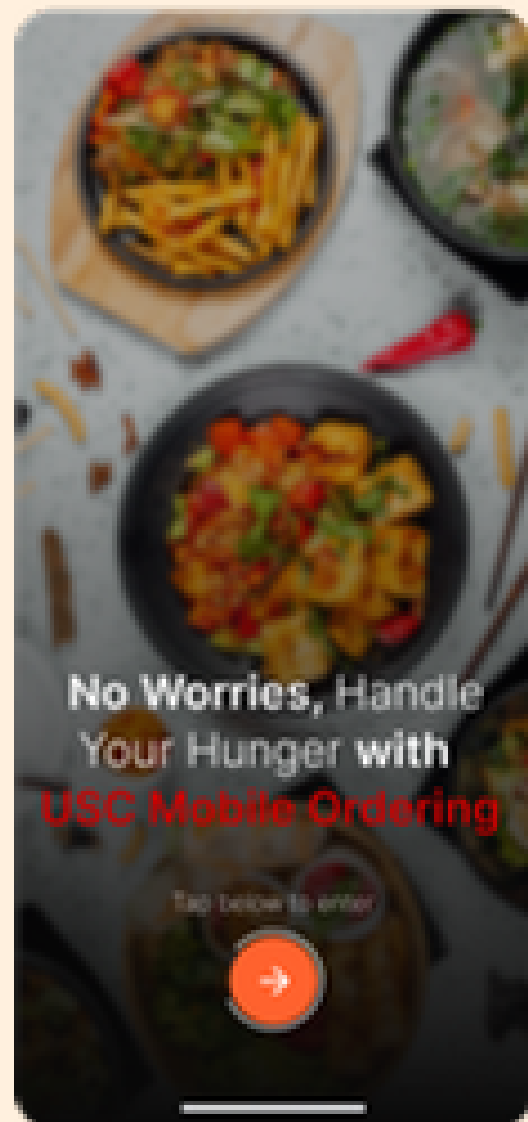

Viability

- Increases order volume and throughput for USC Dining.
- Improves demand forecasting → less waste, better staffing.
- Supports promotions & loyalty, boosting long-term revenue.

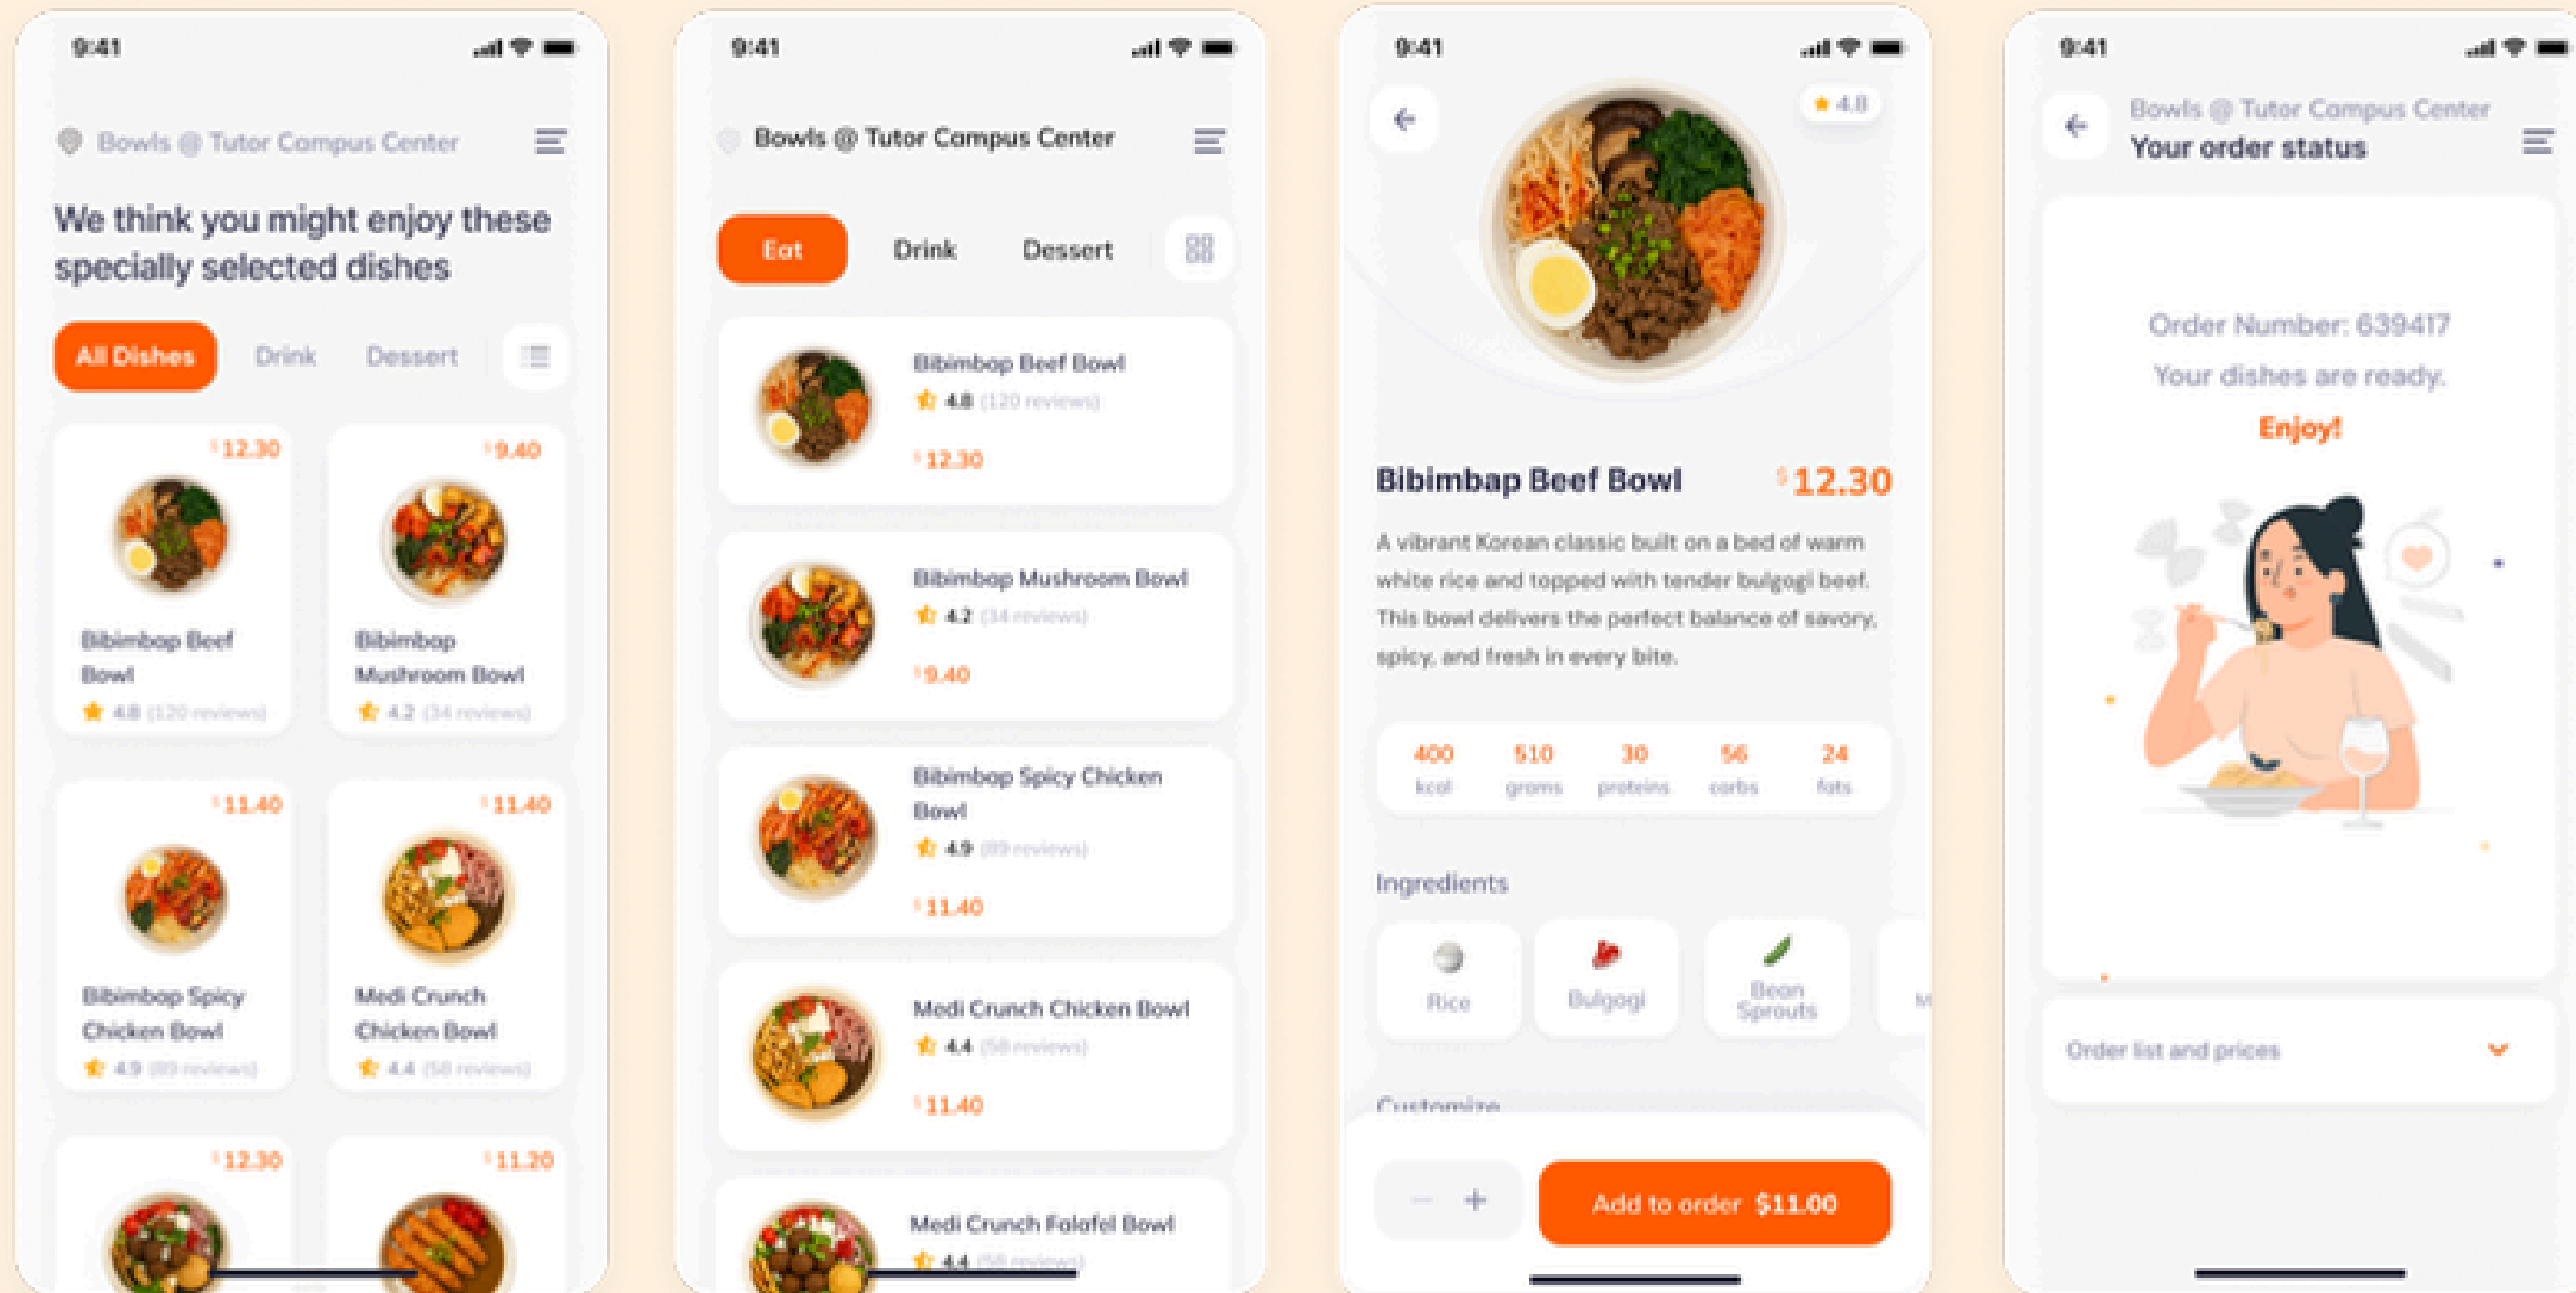

Feasibility

- Built on existing USC backend systems (POS + mobile app).
- Mostly UX/UI improvements, not new infrastructure.
- All features—wait times, history, payment, customization—are standard, implementable components.

User Testing

REGINA DURAN - 20 YEARS OLD
USC COLLEGE JUNIOR
DORNSIFE COLLEGE OF LETTERS, ARTS AND SCIENCES

Individual Results

Regina overall loved the look and efficiency of trojan eats. She had some trouble navigating while we were prototyping it but we were able to fix the issue and take her feedback into account.

1. Task Success & Ease of Use

"The onboarding process was super easy to understand."

5/5

2. Navigation Clarity

"i love how everything is bolded and easy to navigate. i think adding the logos of the places might help make the process more efficient."

3.5/5

User Testing

REGINA DURAN - 20 YEARS OLD
USC COLLEGE JUNIOR
DORNSIFE COLLEGE OF LETTERS, ARTS AND SCIENCES

3. Visual Comprehension & Information Hierarchy

“It used all the good things from the old app and improved it which made it easy to find a lot of the information.”

5/5

4. Perceived Speed & Efficiency

“This is a lot faster and cleaner than the old app. the schedule later option would become my best friend.”

5/5

5. Desirability & Intent to Use

“I have many issues with the original app and found that this one was a lot easier and much more visually pleasing to use.”

5/5

Testing - at a glance

AFTER HAVING ABOUT 20 USERS TEST OUR PROTOTYPE, WE FOUND:

**TASK SUCCESS &
EASE OF USE**

60%

NAVIGATION CLARITY

85%
(APPROX. 17)

**VISUAL COMPREHENSION &
INFORMATION HIERARCHY**

95%
(APPROX. 19)

**PERCEIVED SPEED &
EFFICIENCY**

80%
(APPROX. 16)

**DESIRABILITY &
INTENT TO USE**

100%
(APPROX. 20)

Next Steps

1

BACKEND TIMING FEATURES

Creating a system for more
accurate order timing
features

2

IMAGE LOGISTICS

Making it easy for old and
new meals to have good
photos in the app

3

ADMINISTRATOR FEEDBACK

Work with USC admins to
make the app better for
both sides
